

EMN Policy brief on migrants' movements through the Mediterranean

Full report accompanying the Inform on migrants' movements through the Mediterranean

23 December 2015

EXECUTIVE SUMMARY

When this analysis was first commissioned in late 2014 it was intended to address the arrival of people from North Africa across the Mediterranean to countries such as Italy and their onward movements to northern European countries. However, in 2015 the movement of people has changed significantly with greater numbers arriving via land and sea at the South Eastern EU borders, and the focus of this report has broadened to cover these routes of entry. The study focuses on irregular migratory movements, rather than the regular migration of people using legal mechanisms which are well-established and are measured routinely in published statistics.

It is in this context that the current large numbers of asylum seekers, migrants and displaced persons arriving at our borders is a test for the European Union and its Member States. The normal flow and reception of people has been disrupted by these large numbers of people seeking to enter the EU. In a constantly changing picture of migratory flows, this has emerged in different forms and at different parts of the EU and its external borders.

It is against this backdrop that this Policy Brief, supporting the accompanying Inform on Migrant movements through the Mediterranean and onward movements to other Member, has been produced by the EMN. The aim is to present key data on the irregular movements of people across the EU external borders and within the European Union (EU) itself, whether as asylum seekers or as migrants in search of greater economic security, over the past few years and including the first nine months of 2015.

In identifying key data to illustrate irregular migratory flows, this report attempts to summarise patterns for the EU while focusing on the most important flows and countries of origin. As these patterns are continuously subject to change the picture it presents should be seen as a snapshot of developments over the time period covered.

This report has been compiled by the UK National Contact Point (NCP) of the European Migration Network (EMN) with the collaboration of the Italian, French, Netherlands and Swedish NCPs and input from other members of the EMN along with colleagues at Frontex and Eurostat. Most of the data included comprises standard Eurostat figures on asylum applications and decisions, and Frontex detections data. Although a very good guide to the trends being seen, these data are produced as a result of operational activity and processes. The Frontex data, for example, measure the number of detections recorded and will therefore include people detected on more than one occasion and counted more than once, such as if they cross two borders on separate occasions. Meanwhile German asylum application figures, for example, reflect only the completed applications for asylum and not the larger number of people registered as having an intention to apply for asylum, although not all of them may do so. The latest Eurostat data as reported by each EU Member State is provisional and may be subject to future revisions. Nonetheless, in spite of the inherent uncertainty in the available data, this report represents the most comprehensive attempt to summarise the latest trends.

Asylum trends in the EEA¹ from 2009 to September 2015

- ★ Between 2009 and September 2015 there were 3.3 million asylum applications to the EEA and Switzerland². The number of applications more than doubled between 2009 (287,000) and 2014 (662,000) with the sharpest increase in that latter year. In the first nine months of 2015, numbers increased further and there were 901,000 asylum applications were lodged in the EEA, almost twice the number (451,000) recorded over the same period in 2014.
- ★ Between 2009 and September 2015 Syrian nationals accounted for the greatest number of asylum applications in the EEA (448,000). Almost half (222,000) of these Syrian asylum applications were made in the first nine months of 2015.

¹Includes the EEA and Switzerland

²28 EU Member States + EEA (Norway, Lichtenstein, Iceland) + Switzerland

- ★ The nationalities contributing the next highest number of applications in the first nine months of 2015 were Afghani (103,000), Iraqi (69,000), Kosovo (69,000) and Albania (54,000).
- ★ Amongst EEA Member States, the largest number of asylum applications by far, in recent years have been received by Germany. In the first nine months of 2015 Germany received 32% (289,000) of all applications in the EEA up from 11% of the total in 2009. The Member States receiving the next largest numbers of asylum seekers in the first nine months of 2015 were Hungary 176,000 (20%), Sweden 73,000 (8%), Italy 59,000 (7%), Austria 57,000 (7%), and France 51,000 (6%). On the other side of the coin, less than 100 applications were registered in Croatia and Slovak Republic, less than 200 in Estonia and Slovenia, and under 250 in Lithuania and Latvia. In the Mediterranean, notably Cyprus and Malta, received 1,500 and 1,200 asylum applications, respectively.
- ★ In the first nine months of 2015 Germany also received just under a third (31%) of all Syrian applications for asylum recorded in the EEA, although as noted it is possible there are a large additional number of people who are in Germany and have expressed an intention to apply for asylum.
- ★ Of the total applications for asylum recorded by Germany between January and September 2015 (289,000), 24% were from Syrians, and a further 14% were from Eritreans, Afghans, Somalis and Iraqis. However, one third of Germany's asylum applications were from three Western Balkan countries that are much less likely to be recognised as in need of protection as refugees - Albania, Kosovo and Serbia.
- ★ In the first nine months of 2015 Hungary received the largest percentage of Afghani applications (45%) and the second largest number of applications from Syrians (29%) amongst EEA Member States. Of the 176,000 applications received by Hungary in this period, over 60% were from Syrian or Afghani nationals but a further 14% were from Kosovans (this proportion was much higher in the first quarter of 2015). It is expected that monthly applications for asylum in Hungary will be significantly reduced by the end of 2015 as a result of the measures that country has taken to secure its border.
- ★ Sweden received the third highest number of applications between January and September 2015 receiving 73,000 applications. Just over 70% of Sweden's applications were from countries whose asylum seekers are more likely to be granted protection by the EEA (Syrian, Afghani, Eritrean, Iraqi and Somalia).

Routes into the EU

- ★ The routes irregular migrants use to enter the EU are constantly changing. The Central Mediterranean route from Libya to Italy increased three fold between 2013 (45,000 detections) and 2014 (171,000) and this crossing has been particularly precarious, resulting in the deaths of more than 5,000 migrants over the last two years. This is considered the most treacherous route into the EU, but was by far the most common route used in 2014 with three times the number of arrivals recorded compared to the Eastern Mediterranean route to Greece (51,000).
- ★ However, this pattern changed in 2015. Between January and September 2015 the most commonly used route for irregular entry into the EU was the Eastern Mediterranean which saw a large increase in numbers of detected arrivals (401,000 compared to 132,000 in the Central Mediterranean). There were nearly eight times the number detections via the Eastern Mediterranean route in the first nine months of 2015 (401,000) than in the whole of 2014 (51,000). In September 2015 almost 70% (102,000 of the 149,000) of all detections in the Eastern Mediterranean were of Syrian nationals.
- ★ The Western Balkan land route³ also saw an increase in detections in 2014 (43,000) compared to 2013 (20,000). However, the numbers coming through this route increased significantly in 2015, with a total of 297,000 detection recorded in the first nine months of the year, almost seven times higher than the whole of 2014. This increase reflected the inflow of

³ This route describes two main migration flows; migrants coming from the Western Balkan states into Hungary and the secondary movements of migrants who initially entered the EU through the Eastern Mediterranean through Greece, Bulgaria or Cyprus.

migrants from within Europe (e.g. the Western Balkans) alongside those asylum seekers coming from outside. As Frontex data measures detections and not people, there will, as indicated before, be a degree of double counting as arrivals from outside Europe may have also been detected and counted as arriving in the Eastern Mediterranean.

- ★ In 2015 Syrians have predominantly been arriving through the Eastern Mediterranean and onward land routes (Serbia, Hungary and Croatia). The Central Mediterranean route is currently being mainly used by people coming from a variety of African countries.
- ★ The main people using the Western Balkan route were from Afghanistan, Syria and in the first few months of 2015 Kosovo.

Asylum claims on arrival in the EU and onward movements

- ★ Since its adoption in 1990 (and in the revisions in 2003 and 2013) the Dublin Convention has established the principle that the country where an asylum seeker first applies for asylum is responsible for either accepting or rejecting the asylum claim. The aim of the convention was to bring clarity to the asylum process, and to prevent multiple claims or disputes over where a claim might be considered. However, the convention was not designed to deal with the current numbers of asylum seekers being received in the EU in the most recent period.
- ★ Between January and September 2015, Italy was the main point of entry to the EU for Eritrean and Somali nationals. However, less than 1% of Eritrean and 3% of Somali asylum applications to the EEA were made in Italy.
- ★ Across the EEA as a whole, there were around 36,000 applications for asylum by Eritreans, of whom 9,000 (25%) were received by Switzerland, and 7,000 (19%) by Germany and 6,000 (17%) by Sweden. Of the 17,000 applications from Somali nationals 45% were collectively accounted for by both Sweden (4,000; 23%) and Germany (4,000; 22%).
- ★ Between January and September 2015, Greece was the main point of entry to the EU for nationals from Syria, Iraq and Afghanistan. However less than 2% of applications from these countries were lodged in Greece.
- ★ Six out of ten of all applications from Syrian nationals were to Germany (31%) or Hungary (29%). Hungary received over 40% of all applications from Afghani nationals. While in the first nine months of 2015 Germany (21%) and Finland (18%) have been the top destinations for asylum for nationals from Iraq.
- ★ Not all asylum seekers arrive through irregular routes. Some will arrive in the EU on a regular visa, whether to work, study or perhaps most commonly as a visitor and only apply for asylum when they have to return to their country of origin. The number of asylum applications for Somalis is 22% higher than the numbers detected arriving irregularly for the first nine months of 2015. The difference is much greater for those from Iraq (118%) which suggests Iraqi nationals may be less likely to be detected entering the EU illegally or may have arrived through more regular routes. In contrast, the number of detections and asylum applications are almost the same for Eritreans. For other nationalities, the data suggests that not all of those arriving in the EU will apply for asylum, or that there is at least a time lag between arrival and then applying for asylum.

Rates of acceptance as a refugee in the EEA

- ★ Not all those people seeking asylum will be found to have "a well-founded fear of being persecuted for reasons of race, religion, nationality, membership of a particular social group or political opinion" as defined by Article 1 of the Geneva Convention. The Geneva Convention defines a refugee as someone "outside the country of his nationality and unable or, owing to such fear, unwilling to avail themselves of the protection of that country; or who, not having a nationality and being outside the country of his former habitual residence as a result of such events, is unable or, owing to such fear, is unwilling to return to it."
- ★ There are processes in place in every EU Member State to assess whether a person has a genuine need for protection. The careful consideration of each individual claim means that a number of asylum applications will not necessarily translate into numbers of refugees.
- ★ The average grant rate for all nationalities applying for asylum across the EEA in the first nine months of 2015 was 48% (based on the total number of decisions made in the same period),

but this varies considerably between Member states (from 14% in Hungary to 76% in Sweden). The average rates of acceptance will vary considerably, depending on the nationalities contributing to the flow of asylum seekers being received by a particular EEA Member State. Syrians (96%) and Eritreans (87%) have a high grant rate across EEA Member States at present for well understood reasons, whilst nationals from Kosovo (2%) and Albania (3%) have a very low grant rate.

- ★ Despite almost one half of those people seeking asylum in the EEA receiving refugee status or another form of protection, of the asylum-seeking nationalities arriving in the EEA in significant number, fourteen (in descending order Bahrain, Swaziland, Syria, Central African Republic, Iraq, Eritrea, Kuwait, Yemen, Afghanistan, Palestine, Iran, Saudi Arabia, Somalia and Stateless nationals currently have a grant rate above 60% on average across the EEA.

Factors influencing secondary movements of irregular migrants within the EU

- ★ The impact of weather conditions on the numbers of crossings over the various routes of entry into the EU (Mediterranean Sea crossings peak in the summer, for example) is well known, as is the role of migrant smugglers and the routes and destinations they commonly use.
- ★ Although the asylum process is important in determining which irregular migrants are able to remain legally in the EU, it is not the greatest influence on where in the EU irregular migrants will seek asylum or perhaps stay on in an irregular status. Economic conditions are important, both the legal situation such as whether an asylum seeker is allowed to work, and general labour market conditions. Furthermore, irregular migrants will also be attracted to countries where they perceive they will be welcome and where there are established networks who may often provide information on the conditions in different countries as well as the routes to take to reach them, and communities who can support them on arrival and help them better integrate.
- ★ In 2013 the biggest diaspora groups for migrants from the five nationalities granted asylum in the largest numbers in Europe for 2014 were in Sweden, Germany and the UK which may help to account for the apparent attractiveness of these countries as destinations. Iraqis in Sweden were estimated to be the largest of these particular foreign born populations in Europe (estimated as around 130,000), followed by the German Afghani and Iraqi populations (98,000 and 94,000 respectively), and the UK Somali population (93,000).

Resettlement and Humanitarian aid

- ★ There are a number of areas where the EU has provided significant support for migrants and refugees, including but not only for those people who have arrived in the EU or at its external borders, but also for the larger number still present in conflict areas. Some of these people are provided with aid where they are situated, often temporarily, whether inside the EU or not, and some may be received for resettlement within the EU and other countries (such as the United States, for example).
- ★ The EU has had significant resettlement programmes for refugees which have operated over a number of years. Rather than being received through irregular channels, these programmes generally involve individuals or families who are accepted as refugees being received through a planned approach offering formal support to help them establish a new life in a safe country. Over the period 2009-2014 a total of 40,000 refugees of all nationalities were resettled across the EU in this way. Sweden was the top country accepting nationals from Syria (905), Eritrea (1,785), Afghanistan (2,180), and Somalia (1,730) under the established resettlement programme. Of European countries, non-EU Norway accepted the most Syrian refugees for resettlement in 2014 (785). Germany was the top country for resettling nationals from Iraq (2,900) in the six years 2009-14, with the UK resettling the second largest number over this period (1,300). At least 18 EU and EEA States currently run resettlement programmes.⁴

⁴ Belgium, Czech Republic, Denmark, Finland, France, Germany, Hungary, Ireland, the Netherlands, Portugal, Romania, Spain, Sweden and the UK, as well as Iceland, Norway and Switzerland. Austria, France, Germany,

- ★ In addition, as has been noted, there are very large numbers of refugees being temporarily accommodated in countries closer to their place of origin, for example at present around 2 million Syrians are living in Turkey, 1.1 million in Lebanon and 0.6 million in Jordan. These people are also in need of support and the EU has provided a large amount of humanitarian aid to displaced Syrians outside of the EU in the region of origin, totalling almost €4 billion, which has gone towards helping feed displaced people and provides health care and education for children and other critical services. Providing aid in the region of origin may also help deter refugees from attempting perilous journeys to other countries.
- ★ Amongst EU Member States, the United Kingdom has been the largest contributor of humanitarian aid to Syria, Eritrea, Afghanistan, Somalia and Iraq since 2009 (€1.4 billion). Germany (€850 million) and Sweden (€350 million) were the next most significant contributing EU Member States.

Italy and the UK run humanitarian admission or evacuation programmes. Other Member States, such as Luxembourg, run ad-hoc resettlement activities.

1. INTRODUCTION

This briefing summarises trends in asylum applications and movement of non-EU migrants across the EEA over recent years up to September 2015⁵. It outlines the key routes that migrants use to travel to the EEA and the countries where some subsequently claim asylum, along with some of the outcomes of those claims.

The briefing concentrates on those EU countries receiving the highest number of asylum applications (over 20,000 each in 2014) which are Germany, Sweden, Italy, France, Hungary, UK, Austria, Netherlands and Belgium. Greece is also included where relevant given its geographical location as a key migration route. Comprehensive statistics on asylum applications in all EU Member States are routinely published by Eurostat (<http://ec.europa.eu/eurostat/data/database>) and these statistics are used here and summarised in tables in the annex to this report.

The data does **not** cover movements of migrants once they have claimed asylum, or those migrants entering the European Economic Area (EEA)⁶ who are not detected on entry or who do not subsequently claim asylum.

Asylum applications in the EEA between 2009 and September 2015

Between the start of 2009 and September 2015, a total of 3.3 million asylum applications have been made in the EEA, and the number of applications in 2015 looks likely to rise to around three times the number five years earlier.

Figure 1. Total monthly asylum applications in the EEA (2009 – September 2015)

⁵ Data is presented based on the most recent available. Data from Frontex is available up until September 2015 and Eurostat is up until September 2015. Eurostat data for July and September however is provisional and is subject to upward revisions as countries add or revise their figures. No figures for September were available at the time of writing for Latvia, Ireland, Romania and Spain.

⁶ Refers to EEA and Switzerland

There were around 300,000 asylum applications lodged in the EEA in 2009 and 2010. Since 2010 there has been a steady increase, and a much more marked rise after early 2014, to 663,000 applications in that year (a 42% increase on 2013). In the first nine months of 2015 numbers have risen even further, with 901,000 asylum applications lodged in the EEA, almost twice the number (451,000) recorded over the same period in 2014.

Figure 1 illustrates the number of asylum applications made each month since 2009. It highlights the significant growth in recent years as well as seasonal trends since 2012 (reflecting a higher number of sea-crossings in the summer months). In 2014, this pattern changed again as applications increased over the summer months and peak in October. However, since the end-of-summer peak in October 2014, the monthly asylum applications have not reduced.

Seasonality factors will affect particular routes differently and that in turn will have an impact on numbers of asylum applications. Since June 2015 there have been very large increases in the number of detections particularly in the less seasonally-affected Eastern Mediterranean, and July 2015 was the first time that detections were over 100,000 in one month since Frontex began keeping records in 2008.

Nationalities applying for asylum in the EEA

Over almost six years between the start of 2009 and September 2015 just over one in ten of the 3.3 million asylum applications⁷ received in the EEA were made by Syrian nationals (448,000; or 13% of the total) (Table 1). The numbers of Syrian asylum seekers began to rise in 2011, following the civil unrest in Syria. The next most significant nationalities applying for asylum in the EEA over these recent years were nationals from Afghanistan (281,000; 8%), Kosovo (180,000; 5%), Iraq (171,000; 5%), Russia (163,000; 5%) and Eritrea (143,000; 4%).

The nationalities of asylum-seekers in the EEA can change rapidly for a variety of reasons. There were 901,000 asylum applications in the nine months to September 2015. The top nationalities claiming asylum in this most recent 9 month period were nationals from Syria (222,000; 25%), Afghanistan (103,000; 11%), Iraq (69,000; 8%), Kosovo (69,000; 8%) and Albania (54,000; 6%). While nationals from Syria, Afghanistan and Iraq have a high likelihood of being recognised as genuine refugees (that is they have high grant rates for asylum applications), nationals from Kosovo and Albania do not. Comparative rates of acceptance as refugees are discussed further below.

Table 1: Total annual asylum applications by nationality across the EU (2009 – September 2015)

Third country	2009	2010	2011	2012	2013	2014	Jan- Sep	Total
Syria	5,435	5,605	9,240	25,675	52,755	127,890	221,790	448,390
Afghanistan	25,085	22,255	30,245	30,405	27,840	42,735	102,780	281,345

⁷ Asylum applicant¹ means a person having submitted an application for international protection or having been included in such application as a family member during the reference period. Applications submitted by persons who are subsequently found to be a subject of a Dublin procedure are included in the number of asylum applications. Persons who are transferred to another Member State in application of the Dublin Regulation are reported as asylum applicants also in the Member State where they are transferred to. Within the same reference period every person being a subject of asylum application is counted only once, therefore repeat applications are not recorded if the first application has been lodged in the same reference period. However, such a repeat application will be recorded if lodged in a different reference month. It means that the aggregation of the monthly figures may overestimate the number of persons applying for international protection within the aggregated period (year).

Kosovo	14,970	15,160	10,705	10,925	21,180	38,445	68,995	180,380
Iraq	20,995	16,955	16,110	13,865	11,340	21,925	68,465	170,710
Russia	21,440	19,600	18,955	25,010	42,275	20,235	15,520	163,035
Eritrea	9,735	8,050	10,430	11,995	20,300	46,750	36,010	143,270
Serbia	6,445	18,855	15,645	21,075	22,740	31,175	24,955	140,890
Pakistan	10,165	9,420	16,470	20,110	21,195	22,455	36,755	136,570
Somalia	21,775	16,100	15,260	17,270	18,820	18,155	17,060	124,440
Nigeria	12,645	9,140	15,305	10,635	13,960	21,330	23,255	106,270
Albania	2,120	1,965	3,190	7,760	11,400	17,305	54,350	98,090
Other	149,135	143,515	181,345	179,905	201,955	254,870	230,885	1,339,500
Total	299,945	286,620	342,900	374,630	465,760	663,270	900,820	3,332,890

In the first nine months of 2015, nationals from Syrian made up 25% of all applications for asylum in the EEA. Nationals from Western Balkan countries⁸ made up 19%. In comparison, in 2014 Syrian nationals comprised 19% of the EEA asylum applications, and people from the Western Balkans 17%.

During the first nine months of 2015, there has been a large increase in applications for nationals from Kosovo (458%), Iraq (370%) Albania (533%), Afghanistan (274%), and Syria (160%) in comparison to the same period in 2014. The number of Eritrea asylum applications has decreased slightly by 5%.

There have been very large increases in the summer months of 2015 (July – September) for Syrian nationals in comparison to the same months in 2014. There were around 145,000 asylum applications this summer (July – September 2015), 102,000 more than last summer. Large increases in these months were also seen for nationals from Afghanistan (60,000 in July –Sept 2015 in comparison to 11,000 in 2014, and Iraq 46,000 in comparison to 8,000). For nationals from Kosovo the peak was in February 2015 (24,000 in just that one month). However, the influx of Kosovans appears to have been relatively short-lived and the number of applications has subsequently reduced to 3,000 in May 2015 and has continued to fall after that.

⁸ Includes Albania, Bosnia and Herzegovina, Former Yugoslav, Montenegro, Kosovo and Serbia

Figure 2: Monthly asylum applications by nationality across the EEA (Jan –September 2015)**Figure 3: Top nationalities claiming asylum in the EEA, Jan-Sept 2015**

Countries in the European Union in which asylum seekers seek refuge

Between 2009 and September 2015 Germany received by far the highest number of asylum applications (831,000). In the first nine months of 2015, it received almost one third (32%) of all asylum applications in the EEA, up from an 11% share in 2009. The numbers reported by Eurostat relate to completed applications. However, Germany is also believed to register larger numbers of people who express an intention to apply for asylum, although it is not clear yet how many will do so. This can perhaps explain the larger numbers of migrants German officials have reported as arriving in that country. This can make the German data hard to interpret.

In 2015, of the 289,000 formal applications to Germany 24% were from Syrians. A further 14% were from people coming from other countries with relatively high rates of acceptance as refugees - Eritrea, Afghanistan, Iraq and Somalia. However 35% were from countries in the Western Balkans (Albania, Serbia and Kosovo) who are generally not granted asylum.

Between 2009 and to September 2015 France received the second highest number of asylum applications (401,000) of all EEA countries. France received the largest number of asylum applications of all EEA countries in 2009, but by the first 9 months of 2015 it was sixth, with 51,000 applications. In the nine months to end September 2015 the largest number of applications to France were from Kosovan applicants, making up 8% of applications. Nationals from Sudan and the Democratic Republic of Congo and Syria each made up 6% of applications to France.

The third largest number of asylum applications over the period from 2009 to September 2015 was received by Sweden (339,000). This year to September 2015 Sweden also had the third highest number of applications in the EEA with 73,000. Unlike most other EU Member States, a large proportion of applications to Sweden were from countries more likely to be granted asylum - Syria, Eritrea, Somalia, Afghanistan and Iraq (accounting for over two thirds of the Swedish total in the first nine months of 2015). Thirty-five percent of all applications to Sweden over this period were from Syrians.

Hungary was fourth in the EEA for asylum applications between 2009- September 2015 with 248,000. Hungary witnessed a large increase between 2013 and 2014 (from 19,000 to 43,000, up 126%) however there has been an even larger increase since then and between January and September 2015 there were 176,000 applications making Hungary the second highest Member State recipient of asylum seekers in 2015, behind Germany. Hungary received 20% of all applications to the EEA in the first nine months of 2015 in comparison to less than 2% in 2009. In the first nine months of 2015 over a third of all applications to Hungary (36%) were from Syrian nationals and 26% were from nationals from Afghanistan. However, 14% of applications were from nationals from Kosovo, who have a very low grant rate (a number which was considerably higher in the first few months of 2015).

Italy had the fifth highest number of applications between 2009 and September 2015, at 236,000, and experienced the greatest increase in the number of asylum applications between 2013 and 2014 (27,000 to 65,000, 141%) reflecting the increased numbers of crossings in the Central Mediterranean. Italy had the fourth highest number of applications from January to September 2015 with 59,000 applications. The most numerous applicants to Italy have been from Western African countries rather than the most common asylum seeking nationalities elsewhere in the EEA. Almost 50% of applications to Italy were from nationals of Nigeria, Gambia, Mali or Senegal. A further 10% of applications were from Pakistan and 7% from Bangladesh.

Austria had the fifth highest number of applications between January and September 2015 with 57,000 applications twice the number of the whole of 2014. The top nationalities were nationals from Syria (30%), Afghanistan (22%) and Iraq (16%).

Table 2: Asylum applications in the EU, Member States receiving over 20,000 applications in 2014 (plus Greece) and other states, 2009 to September 2015

Member State	2009	2010	2011	2012	2013	2014	Jan - Sept 15	Total
Germany	33,030	48,595	53,345	77,660	126,990	202,815	288,800	831,235

Figure 4: Percentage of the total asylum applications for the top ten EU recipient countries and other EU Member States, 2009 to September 2015

Table 2 and Figure 4 show that over the past four years Germany has been receiving many more asylum seekers than any other EEA country, and in the first nine months of 2015, the number of asylum applications made in Germany has increased to 289,000, compared to around 50,000 four years earlier.

The number of asylum applications in Hungary for the year up until September (176,000) are already four times larger than the whole of 2014 and more than ten times the number in the same period in 2014 (14,000). In 2011, Hungary received only 1,700 applications for asylum.

Figure 5: Monthly asylum applications for key EU Member States (January – September 2015)

Source: Eurostat

It should be noted that there are a range of asylum pressures across the globe, including those related to the applications being seen in the EU resulting in very large numbers of Syrian refugees residing in neighbouring countries in the Middle East. There are however also a range of other refugee crises across the globe. In 2014, the European country receiving the largest number of asylum applications was Russia, the vast majority of which were from nationals of Ukraine.⁹

Migrant routes to Europe between 2009 and September 2015

The routes migrants use to travel to Europe have also been changing. Table 3 presents the numbers of detected illegal border crossings between 2009 and September 2015 for each of the main routes used to enter the EU. The data used are the numbers of detections recorded and published by Frontex.

Table 3: Number of detections¹⁰ along EU entry routes (2009 – 2014)

Routes	2009	2010	2011	2012	2013	2014	Jan- Sept 2015
Central Mediterranean route (Italy, Malta)	11,043	4,450	64,261	15,151	45,298	170,664	132,176
Eastern Mediterranean route (Greece, Cyprus, Bulgaria)	39,975	55,688	57,025	37,224	24,799	50,834	401,264
Western Balkan route¹¹	3,089	2,371	4,658	6,391	19,951	43,357	297,255

⁹ <http://researchbriefings.parliament.uk/ResearchBriefing/Summary/CBP-7210#fullreport>

¹⁰ Detections includes irregular migrants and those seeking asylum. The detections do not relate to people but occurrences, therefore double counting may occur if the same person is detected on two separate occasions.

¹¹ The Western Balkan route describes migrants from the Western Balkan countries themselves, and the secondary movements of mainly Asian migrants who enter the EU through the Bulgarian-Turkish or Greek-Turkish land or sea borders and then proceed, through the Western Balkans, into Hungary.

Routes	2009	2010	2011	2012	2013	2014	Jan- Sept 2015
Circular route from Albania to Greece	40,250	35,297	5,269	5,502	8,728	8,841	6,816

Source: Frontex 2015 Risk Analysis Report

In 2013 and 2014, the largest number of migrants (171,000) were detected on the Central Mediterranean route, primarily involving travel from Libya to Italy and Malta. This contrasts with previous years when the Eastern Mediterranean crossing was the main route taken by migrants to reach Europe. Large increases in other routes have been seen in recent years. The Western Mediterranean region, which consists of several areas of the southern Spanish coast and the land borders of Ceuta and Melilla has consistently had only around 5,000 – 9,000 detections over the period 2009 -2014. The migrants using this route mainly originated from Cameroon, Algeria and Morocco. However earlier, in 2006, there had been a surge of people from North and Western Africa arriving by boat in the Canary Islands with the Spanish Ministry of Interior reporting 39,180 irregular arrivals of which 31,678 were in the Canaries¹³. Although on a smaller scale, there are similarities with the increases in the Central Mediterranean route more recently, although the countries of origin were more politically stable than Syria and Eritrea are now.

In 2014 the Central Mediterranean was the main route being used by irregular migrants to enter the EU, as it was the previous year although the numbers were smaller. The number of people using this route increased more than three-fold between 2013 (45,000) and 2014 (171,000) and in 2014 the Central Mediterranean route accounted for two thirds (66%) of all detections. This increase was clearly influenced by the increase in Syrian migrants with 40,000 Syrian nationals detected arriving via the route in 2014, the second and third largest numbers coming from Eritrean nationals (34,000) and a number of countries in sub Saharan Africa¹⁴ (26,000).

The routes taken by migrants to enter the European Union changed in 2015, with a return to using the Eastern Mediterranean route. In 2015 the Eastern Mediterranean route once again detected the highest proportion of migrants (as had also been true in 2010 and 2012) with numbers up until September (401,000) already nearly eight times higher than the whole of 2014 (51,000). This increase in flows to the Eastern Mediterranean has not, however, coincided with a decrease in detections via the Central Mediterranean. Overall detections in the Central Mediterranean have remained similar to last year although in recent months there has been signs of a reduction.

The main driver of the increased flows along the Eastern Mediterranean route appears to be a shift in routes of nationals from Syria, who previously headed predominantly for the Central Mediterranean route. This evolved in 2015, as the vast majority of Syrian asylum seekers is coming to the EU via the Eastern land and sea routes, rather than the Central Mediterranean. However, the central route is still witnessing large inflows of other, predominantly African, migrants.

¹² Entry to the EU via Estonia, Finland, Hungary, Latvia, Lithuania, Norway, Poland, Romania and Slovakia

¹³ <http://migrantsatsea.org/2012/02/13/increase-in-numbers-of-migrants-reaching-spanish-coast-in-2011/>

¹⁴ This is a category provided by Frontex of the migrant origin and there is no further detail available.

From January to September 2015 there were 401,000 detections in the Eastern Mediterranean. In September of 2015, 69% of the 149,000 detections in the Eastern Mediterranean route were Syrian (102,000). Altai Consulting (2015) reported that during 2014 it became more difficult for Syrians to use the Central Mediterranean route for two reasons. Firstly, the unrest in Libya in 2014 led to an increased risk of ill treatment and exploitation of migrants and asylum seekers which changed the flows of those entering and departing (IOM 2015). Secondly, the visa requirements for Syrian nationals introduced in Egypt in July 2013 and in Algeria in December 2014 made it more difficult for Syrians to travel to those countries and thereby access the Central Mediterranean route towards the EU.

Other primary users of the Eastern Mediterranean route in 2015 have been nationals from Afghanistan, Iraq and Pakistan. While Syrian nationals were the top nationality detected using the Central Mediterranean in 2014 with 40,000 arrivals recorded, in the first nine months of 2015 Eritrean (34,000), followed by Nigerian (18,000) nationals were the top nationalities detected on that route.

Between January and September 2015, there has also been a surge in detections in the Western Balkans – with 297,000 detections in the first nine months of 2015, in comparison to 43,000 in the whole of the previous year. The largest numbers of arrivals are from Afghanistan, Syria and, in the first few months of 2015, Kosovo (Frontex 2015). Apart from nationals coming directly from the Balkans this route will include the secondary movements of migrants who previously arrived in Greece. As a result of this complex phenomenon, there will therefore be some double counting in the data.

Figure 5: Monthly detections for the Eastern and Central Mediterranean route and the Western Balkan route (January to September 2015)

Decisions across the EEA (January – September 2015)

Once an individual lodges an asylum application, the EEA Member State in which he or she applies must decide whether to award refugee status or humanitarian protection. Table 4 presents the number of decisions each country made in the first nine months of 2015 and the proportions granted either form of protection.

The overall number of people accepted as refugees will be a product of both the number of applications and the decisions made on those applications, which in turn will be different depending on the countries of origin from which asylum seekers originate.

The numbers of asylum decisions are not a direct subset of the applications as an asylum application may not be decided in the same year as the original application was made. As a result, in some cases more decisions may be recorded than applications received in the same year.

The highest number of asylum decisions in the EEA was reached in Germany (149,000) as 46% (68,000) of their total decisions resulted in granting protection. France came second (56,000) although the number granted protection as a proportion of decisions was lower, at 26% (15,000), in part reflecting the different mix of nationalities applying for asylum in France. In comparison, while third in terms of the number of decisions, Sweden had the highest grant rate (76%) and second in the total number of positive decisions (23,000) – as noted previously, reflecting the specific mix of nationalities of asylum seekers applying for asylum in Sweden.

Hungary had the lowest grant rate (14%) in the EEA, while Hungary also had the largest number of withdrawn applications at 42% in 2014. This factor partly explains the lower number of decisions, and subsequently positive decisions, in relation to the number of applications.

In the first nine months of 2015, the United Kingdom was the only country amongst major recipients of asylum seekers in the EEA to make more decisions (30,000) than the number of applications received in the same period (27,000).

Table 4: Number of applications and first instant decisions¹⁵ for asylum applications by EU country in 2015 (January – September)

Member State	Applications	Decisions	Positive	Rate of positive decisions ^a
Germany	288,800	149,100	68,315	46
Sweden	73,065	29,745	22,695	76

Source: Eurostat

¹⁵ First instance decision: decisions (positive and negative) considering applications for international protection as well as the grants of authorisations to stay for humanitarian reasons, including decisions under priority and accelerated procedures taken by administrative or judicial bodies in Member States. First instance decisions include decisions granted to persons who are a subject of the Dublin Regulation. The rationale for using first instant decisions was that they these applications are more likely to be linked to more recent movement of migrants than all decisions (including outcomes following appeal) which may only be concluded sometime after the original arrival and application for asylum.

The rate of positive decisions is the number of positive decisions to grant asylum or any other form of humanitarian protection as a proportion of the total numbers of decisions made.

As noted, the number of positive decisions are influenced by the different mix of nationalities applying for asylum in each country. Table 5 presents the average percentage of positive decisions for asylum applications for each of the main asylum-seeker nationalities across the whole EEA in the first nine months of 2015.

In 2015, the highest number of positive decisions were from Syria (91,000), while nationals from that country also had the highest acceptance rate (96%) of any nationality.

The second highest number of positive decisions were from Eritrea (20,790) as it also had the second highest rate of positive decisions (87%). Iraq (87%), Afghanistan (69%), Iran (66%) and Somalia (61%) are other countries whose nationals receive more than 60% positive decisions for asylum applications. In addition, Stateless nationals also received a positive decision in 88% of cases. It must be noted that a number of countries with low or very low numbers of application and decisions also have a share of positive decisions of over 75% (Bahrain, Swaziland, Laos, Central African Republic), or between 60% and 75% (Kuwait, Yemen, Palestine and Saudi Arabia)

In 2015, Kosovo and Albania had the fourth and fifth highest number of asylum applications in the EEA but had, along with Serbia, by far the lowest proportion of positive decisions (Albania 3%, Kosovo 2%, and Serbia 2%).

Table 5: Number of applications and first instant decisions for asylum applications by origin country, January to September 2015

Third Country	Applications	Decisions	Positive	% positive
Syria	221,770	90,725	87,025	96
Stateless	11,095	7,435	6,575	88
Eritrea	36,010	23,910	20,790	87
Iraq	69,465	17,045	14,845	87
Afghanistan	102,755	12,645	8,765	69
Iran	12,135	6,185	4,095	66
Somalia	17,060	6,580	4,000	61
Sudan	8,370	5,470	3,100	57
Gambia	10,185	6,360	2,205	35
Mali	6,470	7,100	2,085	29
Nigeria	23,235	11,420	3,000	25
Pakistan	36,610	12,635	3,080	24
Bahrain	30	30	30	100
Laos	10	5	5	100
Swaziland	10	20	20	100
Central African Republic	675	515	455	88
Kuwait	180	115	85	74
Yemen	1,065	290	205	71
Palestine	2,375	830	565	68
Saudi Arabia	60	40	25	63
Albania	54,325	26,275	765	3
Kosovo	68,990	32,095	750	2
Serbia	24,955	17,375	265	2
Other	197,390	114,815	31,980	28
Total	905,225	399,915	194,715	49

In 2015, Syria accounted for 25% of the total applications to the EEA but over 45% of the total number of positive decisions. The applications from Syria, Eritrea, Afghanistan, Iraq, Iran and Somalia together accounted for around half (51%) of the applications for asylum in the EEA in the first nine months of 2015. Nationals from Albania, Kosovo and Serbia together accounted for 16% of applications. In the same time period the former group accounted for over 70% the positive decisions across the EEA. The three Balkan countries accounted for less than 1% of the positive decisions.

Figure 6: Percentage of total applications and total positive decisions to the EEA by nationality, January to September 2015

Additional themes in relation to current migration patterns

The following section looks in more depth at the people coming from five third countries with the highest rates of positive decisions across the EEA at present - Syria, Eritrea, Somalia, Afghanistan and Iraq¹⁶. Together these five nationalities accounted for half of all asylum seekers in the first nine months of 2015 and 72% percent of the total number granted asylum in that year. This section highlights a number of additional themes and data to help understand and interpret current trends, namely humanitarian aid provided to the region, other drivers that may encourage people to come to the EEA, patterns of onward migration once people have crossed the EU external borders, the success of asylum applicants in being accepted as refugees and forms of direct resettlement which have been undertaken.

The EU has adopted a variety of responses to support people in crisis countries. This will include aid to support people displaced within their region of origin, temporary assistance to migrants arriving in the European Union and more substantive support to people granted permanent asylum and resettlement. The balance between resettlement numbers, asylum applications received and aid provided to the region will not be consistent between countries for a variety of reasons, not least the proximity to routes of entry to the EU and presence of existing diaspora communities, which might also attract migrants to particular countries.

¹⁶ This group does not comprise nationals from countries with low or very low numbers of applications.

Humanitarian relief in the EU

Since the Syrian conflict began in 2011, the UNHCR estimates that (as of November 2015) over 4 million Syrian refugees were living outside of Syria. The majority reside in the neighbouring countries of Turkey (with 2.1 million Syrian refugees), Iraq, Jordan, Lebanon and Egypt which together have registered a further two million Syrians, numbers that may continue to grow. UNHCR have estimated that only around 10% of all Syrians seeking refuge have so far applied for asylum in Europe.

The EU has been growing amounts of humanitarian aid to support people who have been displaced, the vast majority of whom are still living in their regions of origin and have not crossed the EU external borders. Provision of humanitarian aid within the region could deter the movement of some people on perilous journeys to the EU. In 2013 and 2014, total donations by EU Member States to the benefit of Syrian nationals exceeded €500m and a similar amount has already been donated in the first eight months of 2015. The total amount of humanitarian aid provided for supporting Syrians has increased year on year and the ten EU Member States receiving the largest numbers of Syrian asylum seekers have collectively provided €1.8 billion since 2009 (table 6). Since 2009, the UK has provided the largest amount of aid to Syrians compared to other European countries (€1 billion), while Germany and the Netherlands are respectively the second (€493m) and third (€131m) largest donors.

Table 6: Humanitarian aid provided to Syria by the Top 5 EU donor countries between 2012 and 2015 (€millions)

EU Member State	2012	2013	2014	2015 (Jan-Aug)	Total 2012 - 2015
UK	83.1	248.5	310.2	373.9	1,015.7
Germany	48.2	194.8	165.2	82.0	492.7
Netherlands	19.5	31.5	47	31.9	130.9
Sweden	11.2	22.8	15.9	19.9	75.4
France	12.9	18.1	10.5	7.6	49.2
Other EU countries	14.9	53.3	37.1	21.5	129.5
Total	190.0	569.0	586.1	536.8	1,893.7

Source: EDRIS

Other countries in crisis have also been recipients of humanitarian aid, although to a lesser degree than Syria.

For example, financial aid donated to Eritreans in their region amounted to €21 million in total since 2009, a figure substantially lower than the sum provided to support Syrians. The United Kingdom provided more than half of the amount recorded by the EU (€11.3m) although has not provided aid to Eritrea since 2011. Netherlands donated €3.8m, in 2009 and 2010. Sweden has provided a total of €3.7m in aid to Eritrea but – as is the case for all EU donations to Eritrea – no financial contributions in 2015.

Considerably more humanitarian aid has been provided to Somalia, with EU Member States collectively donating €628m between 2009 and 2015. Annual donations peaked in 2011 (€180m) but was only €42m in 2015. The United Kingdom has donated the most humanitarian aid to Somalia (€253m) over this period and accounted for around 40% of the total aid from EU countries, including in the latest year.

Since 2009, the EU has collectively donated €477m in humanitarian aid to Afghanistan. As with Somalia, this figure peaked in 2011 (€101m) before the start of the Syrian crisis and has since abated. In the period 2009 to 2015, Germany donated most humanitarian aid to Afghanistan (€121m), followed by Sweden (€88m) and the United Kingdom (€53m).

EU Member States have provided a similar sum to support Iraqis (€378m), but almost half (49%) of this figure was donated in 2014 (€186m), and a further quarter (27%) in 2015. Germany has donated the most humanitarian financial aid to Iraq (€148m), followed by Sweden (€71m) and the UK (€56m).

Existing migrant communities in the EEA

Migrants and asylum seekers arriving in the EU are often attracted to Member States where there are existing national or ethnic communities, as this can facilitate integration and provide them with support and networks to assist them on arrival.

The two EU Member States with the largest Syrian diaspora at the beginning of this century were Germany and Sweden, with an estimated 25,000 and 14,000 Syrian residents respectively in the year 2000. However, these were also the two countries who have received the largest numbers of asylum seekers in the most recent period. Almost half (47%) of the 154,619 Syrian born residents in Europe in the latest estimates (2013) were living in these two Member States.

Figure 7: The largest Syrian resident populations in EEA Member States (2000 and 2013)

Source: United Nations Department of Economic and Social Affairs

In contrast, Eritrean asylum seekers have not always gone to Member States where there were existing diaspora. For instance, in the year 2000 Italy, the United Kingdom and Germany had the largest Eritrean diaspora, but the number of Eritreans appears to have risen faster in the United Kingdom than either Italy or Germany. Although most Eritreans arriving irregularly in the EEA come through Italy, the vast majority appear to travel on to other countries, such as Germany or Sweden.

Figure 8: The largest Eritrean resident populations in EEA Member States (2000 and 2013)

Source: United Nations Department of Economic and Social Affairs

Like Eritreans, Somali migrants have not always gone to third countries where there were existing diaspora. For instance, in 1990 Italy had the largest Somali diaspora (11,363) but by 2013 was only 5th (11,961) as Somalis moved on to other countries in the EEA. As with Eritreans, the United Kingdom went from having a small Somali population in 1990 (503) to having the largest diaspora (93,181) by 2013. Of the estimated 235,736 Somali born residents in Europe, 40% were living in the UK by 2013. Between 2000 and 2010 the Somali born population in the UK almost tripled (from 38,304 to 108,149).

Figure 9: The largest Somali resident populations in EEA countries (2000 and 2013)

Source: United Nations Department of Economic and Social Affairs

Germany had the largest Afghan diaspora in 2000 (around 70,000) and again 2013 (around 100,000), when its Afghan population was estimated to be over 50% larger than the second largest EEA national Afghan community (in the UK). It was also the top country for asylum applications from Afghanis in 2014.

Onward movements in Europe

Between January and September 2015 there were almost 380,000 Syrian migrants detected as crossing into the EU. Frontex data suggests that around two thirds arrived through the Eastern Mediterranean route. Most Syrians did not apply for asylum in the first country they arrived in, but instead move on to other EEA countries. For example, although more than 100,000 Syrians entered Greece in September alone only around 3,000 claimed asylum there in the first nine months of 2015. This was just 1% of the total number of Syrian asylum applications to the EEA during this period (222,000). Over the same period, Germany accounted for more than a third of the total Syrian asylum applications (68,000; 31%) followed by Hungary (64,000; 29%) and Sweden (26,000; 12%).

Between January and September 2015, there were 218,000 first time asylum applications in the EEA from Syrian nationals, around 60 per cent of the total number of Syrian migrants recorded as entering the EU. It is clear that not all of those recorded as arriving have necessarily applied for asylum at this stage – some may do so subsequent to arriving, others may instead continue to remain in an irregular situation, possibly still considering themselves to be in transit to a further destination. Germany for example is believed to register large numbers of people who intend to apply for asylum, but the statistics on asylum applications reported to Eurostat only relate to subsequently completed applications. Other asylum seekers may arrive clandestinely and remain undetected, and others may have arrived via a legal route (such as a visitor or student visa) and subsequently claim asylum, for example upon expiration of their visa and realising the situation in their country of origin has deteriorated. It is also possible that some asylum seekers initially present themselves as of a certain nationality, while their real citizenship is only established later.

Most Eritreans appear to enter the EU through Italy but the number of Eritreans claiming asylum in Italy is relatively small. In the first nine months of 2015 there were 35,000 Eritreans recorded as having entered the EEA, but only 265 registered applications for asylum in Italy. Across the EEA, there were around 36,000 applications for asylum by Eritreans, of whom 9,000 (25%) were received by Switzerland, and 7,000 19% to Germany and 6,000 (17%) to Sweden. A similar pattern can be discerned for Somali nationals, with for example 17,000 Somali migrants claiming asylum in the first nine months of 2015, the majority of whom arrived via Italy. However, the number of Somali nationals claiming asylum in Italy was only 550 that is 3% of the total number of Somali asylum applications in the EEA during this period. Over the same period, 45% of the Somali applications were collectively accounted for by both Sweden (4,000 23%) and Germany (4,000; 22%).

Between January and September 2015, 130,000 Afghani nationals were detected illegally crossing into the EEA. The main point of entry for Afghani nationals is Greece, with 69% percent entering through that country in September. The number of Afghani nationals claiming asylum in Greece, however, was only 1,500, or 1% of the 103,000 Afghani asylum applications over this period. Hungary received the highest number of asylum applications from Afghani nationals (46,000 or 45%), followed by Germany (15,000 or 14%) and Austria (13,000 or 12%).

Research by the United Kingdom House of Commons Library suggested that the higher number of detections could “be partially explained by the changing status of Afghan migrants already living in the third countries. One contributing factor may be the expiry at the end of June 2015 of resident visas of over 500 000 Afghans currently living in Iran. It is unclear how many will have their visas renewed given the plans of the Iranian government to repatriate foreigners living on its territory. Another important development is the tightening of labour laws in Saudi Arabia, where many Afghans work. All these factors, combined with the uncertain security situation in Afghanistan, contribute to the movement of nationals of Afghanistan towards the EU”.

Similarly, there were 30,000 detections of Iraqi nationals from January to September 2015, though less than 1% of the 69,000 asylum applications of Iraqi nationals lodged in the EU were made in Greece, despite it being the key point of entry for nationals from Iraq with 84% of all detections in September in Greece. The main Member States where Iraqi nationals claimed asylum

between in the first nine months of 2015 were Germany (15,000 or 21%) and Finland (12,000 or 18%).

Asylum decisions and grant rates in the EEA

As noted previously in this report, Syrian nationals applying for asylum are likely to be granted asylum, while Eritreans also have high grant rates. It is possible that some of the people recorded as Syrians were refused if it was discovered they were not Syrian, though the reasons for refusal are not available from routine statistical data. However, as noted previously and perhaps in part as a result of factors such as these, the proportion of asylum applications which result in a positive decision varies considerably between different recipient Member States.

In the first nine months of 2015, for Syrian nationals the rate of positive decisions ranged from 71% in Hungary to over 99% in Sweden and Greece. For Eritreans it varied from 48% in UK to 98% in Sweden. However, for other nationalities applying for asylum in significant numbers the grant rates are often (much) lower. For nationals of Western Balkan countries (Kosovo, Serbia and Albania) the average rate of positive decisions in the EEA is 2%.

Table 7: Number of decisions and share of positive decisions for main nationalities seeking asylum in various EEA Member States, January to September 2015

	Syrians		Eritreans		Kosovo, Serbia and Albania	
EEA Member State	Decisions	%Positive	Decisions	%Positive	Decisions	%Positive
Germany	47,000	96%	3,500	94%	59,385	0%
Hungary	140	71%	10	100%	1,195	0%
Sweden	13,000	99%	5,000	98%	2,905	2%
Italy	245	92%	455	90%	290	53%
France	2,000	97%	575	57%	6,430	12%
United Kingdom	2,000	86%	3,000	48%	1,490	18%
Total EEA	91,000	96%	24,000	87%	75,765	2%

Source: Eurostat

There appears to be no clear relationship between the likelihood of being accepted as a refugee and onward movement to other EEA countries. In the year ending September 2015 the share of positive decisions for Eritreans in Italy (where Eritreans typically arrive) was almost as high (90%) as in Germany (94%) and higher than Switzerland (85%) which is where Eritreans have tended to move to make their claim. Grant rates for Somalis in Germany (51%) and Sweden (59%) where they claim asylum were lower than in Italy (97%) where they first arrive, but where relatively few remain.

Syrians, Afghanis and Iraqis typically arrive in the EU via Greece. In the first nine months of 2015 the rate of positive decisions for Syrians in Greece was 99%, and 95% in Germany, 99% in Sweden and 71% in Hungary– three Member States with the highest number of asylum applications of Syrians.

Resettlement in the EEA

Resettled persons are people who have been granted authorisation to reside in an EEA Member State within the framework of a national or EU resettlement scheme. Resettlement means that a third country national is transferred on the basis of their need for international protection as opposed to the third country national travelling to an EEA Member State to claim asylum and then being granted refugee status. Resettled persons are permitted to reside with secure legal status.

Since 2009 the EEA has resettled 3,560 Syrians, with a more than ten-fold increase in the number of Syrians resettled in the EEA between 2013 (265) and 2014 (3,175), as Member States other

than Sweden also started participating in resettlement activities. In the period 2010-2012 a total of 120 Syrians were received as part of a resettlement scheme. Sweden resettled the highest number of Syrians since 2009 (905) but in 2014 Norway resettled most Syrians (785).

Table 8: Total number of resettled Syrian nationals 2009-2014

EEA Member State	2009	2010	2011	2012	2013	2014	Total

Source: Eurostat

The total number of refugees resettled across the EEA over the period 2009-14 was 40,105. The top five countries benefitting from resettlement are shown in Table 9.

Table 9: Nationalities with the largest numbers of beneficiaries of resettlement in the EEA, 2009-2014

Third Country	2009	2010	2011	2012	2013	2014	Total
Iraq	3,930	1,355	485	430	360	365	6,925

Source: Eurostat

In the period 2009-2014 the country with the highest number of resettled nationals was Iraq. Since 2009 Germany has resettled the highest number of Iraqi nationals (2,900), followed by the United Kingdom (1,300), Finland (760) and France (650).

The second group of resettled persons was from Somalia, with Sweden resettling most Somalia nationals (1730), followed by the United Kingdom (990) and Norway (745). Afghani nationals were third mostly likely to be resettled, with again Sweden having resettled more than half of the total number of Afghani nationals resettled in the EU since 2009 (2,200), followed by Finland (900) and Norway (800).

In this period the EEA also resettled almost 4,000 Eritrean nationals. Sweden resettled the highest number of Eritreans (1,785), followed by Norway (1,350), with these two countries together accounting for 79% of the Eritreans resettled in the EEA up to the end of 2014.

^a Subject to upward revisions

¹⁷ All asylum application figures include main applicants and dependents. Asylum applicant' means a person having submitted an application for international protection or having been included in such application as a family member during the reference period. Applications submitted by persons who are subsequently found to be a subject of a Dublin procedure are included in the number of asylum applications. Persons who are transferred to another Member State in application of the Dublin Regulation are reported as asylum applicants also in the Member State where they are transferred to. Within the same reference period every person being a subject of asylum application is counted only once, therefore repeat applications are not recorded if the first application has been lodged in the same reference period. However, such a repeat application will be recorded if lodged in a different reference month. It means that the aggregation of the monthly figures may overestimate the number of persons applying for international protection within the aggregated period (year).

^a Not all country data available for these months

¹⁸ This data is obtained from Frontex although Member States are responsible for collecting and providing their statistics to Eurostat. Consistent with other law-enforcement indicators, variations in administrative data related to border control depend on several factors. In this case, the number of detections of illegal border-crossing and refusals of entry are both functions of the amount of effort spent detecting irregular migrants and the actual flow of irregular migrants to the EU. For example, increased detections of illegal border-crossing might be due to a real increase in the flow of irregular migrants or may in fact be an outcome of more resources made available to detect them. In exceptional cases, increased resources may produce a rise in reported detections while effectively masking an actual decrease in the flow of migrants, resulting from a strong deterrent effect. Information on national-level resources for border-control authorities and their allocation is currently only partially known by Frontex. These data are provided by Member States themselves either within the Schengen evaluation mechanism or within the External Borders Fund (EBF) reporting. Without systematic and reliable information on resources allocated to border control and without estimates of irregular migration flows, it is not possible to assess the performance and impact of the border controls put in place.

Source: Illegal detection Frontex, First time Asylum Applications Eurostat

¹⁹ The number of detections illegally crossing a border into the EU and the number of first time asylum applications are not comparable given that they are not the same people. Some of the asylum applicants may have arrived on a regular visa or undetected. However the difference in these figures between countries may indicate certain nationalities are arriving undetected or via another route and changes between months provide some indication of the changing pictures of the routes and possibly detections. Source: EDRIS²⁰ Humanitarian Aid (data as of 19th of August 2015)

²⁰ Data on humanitarian aid has been taken from the European Emergency Disaster Response Information System (EDRIS). EDRIS presents real time information on cash and in-kind assistance provided by Member States (MS) to different countries/regions. Examples of the recipients of funds are Oxfam, UNICEF and OCHA
